

*Welcome!*

# Predictive “Quality” for Patient Safety

January 22, 2021  
11am-12pm ET

XAVIER HEALTH

Inspiring collaboration. Leading innovation. Making a difference.

# Sponsored by:

# Webinar Leaders

**Larry Mager**  
Principal and Founder  
Mgmt-Ctrl

**Marla Phillips**  
Director, Xavier Health  
Xavier University

Inspiring collaboration  
with FDA and industry communities

Leading innovation  
to develop breakthrough solutions

Making a difference  
to the future of world health

# Leading Innovation

A decorative graphic on the right side of the slide consists of several overlapping, nested chevron shapes pointing to the right. The chevrons are rendered in various shades of blue, from a dark navy blue to a lighter, vibrant cyan, creating a sense of depth and movement.

## CONFERENCES

- FDA/Xavier PharmaLink Conference
- FDA/Xavier MedCon Conference
- Xavier AI Summit
- Xavier Combination Products Summit

## INITIATIVES

- Xavier Artificial Intelligence Initiatives
- Xavier YoPros Network
- Xavier Peer Pros Network - **New!**
- AI World Consortium - **New!**
- Xavier AI Experts Network - **New!**

## DEVELOPMENT

- **Predictive Quality Webinar - Free!**
- 510(k) Workshop
- EU MDR Workshop
- Avoiding Top Landmines When Launching AI
- Predictive Capabilities for Unpredictable Times
- Device: Addressing and Preventing Recalls
- Design and Development Webinar Series

**Making a  
Difference  
WITH YOU**

## This sheet will help you:

- Formulate desired result
- Figure out scope
- Assess stakeholder/alliance
- Determine what, who, when

## Action Plan

**Desired Result:** What do you want to do and achieve?  
\_\_\_\_\_  
\_\_\_\_\_

**Scope** (In or Out)  
\_\_\_\_\_  
\_\_\_\_\_

**Stakeholder/Alliance Assessment**

Stakeholders	Stakeholder Needs That Will Be Fulfilled	Stakeholder Issues

**3Ws - What/Who/When**

What	Who	When

**Miscellaneous/Other Issues To Be Considered**  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**For the  
Patients You  
Serve**

# Predictive *'quality'* for Patient Safety

# ***What is predictive 'quality' for patient safety?***

**Predictive 'quality' for patient safety is focused on the management and reduction of *'unreasonable'* and/or *'unacceptable'* patient harm that is associated with the use of a medical device or combination product.**

# ***Risk Management - ISO 14971:2019***

## ***A.2.10 Production and post-production activities***

*It cannot be emphasized too often that risk management does not stop when a medical device goes into production.*

*Therefore, the manufacturer needs to **collect and review production and post-production information and evaluate its relevance to safety**. The information can relate to new hazards or hazardous situations, and/or can affect their **risk estimates** or **balance between benefit and **overall residual risk****.*

# ***Overall Residual Risk***

Guidance on the application of ISO 14971

ISO TR 24971:2020; 8.1 – General considerations

The companion guidance document to the 3<sup>rd</sup> Edition of the ISO 14971 risk management standard refers to an updated approach to the evaluation of ***overall residual risk*** as a “***difficult and challenging task***”, further *stating...*

*“There is no preferred way for evaluating the overall residual risk. The manufacturer is responsible for determining an appropriate method.”*

# ***‘State of the Art’ Benefit of Patient Safety***

*The ‘state of the art benefit’ of patient safety is established through an understanding of post-market device ‘quality’ and is achieved when the **overall residual risk** provided with any specific device is aligned with the level of risk that is inherently experienced with the use of competitive devices.*

*This is a criteria/policy that should be relevant and obvious to all stakeholders associated with the life sciences industry.*

# ***Risk Management***

Uses for the *residual risk*' technology solution:

- 1) *The 'residual risk' technology solution can be utilized during **design control** to quantify the overall residual risk of the product failure modes associated with the targeted market segment.*
- 2) *The 'residual risk' technology solution can be utilized to establish an understanding of the 'benefit' of patient safety that is associated with the use of currently marketed medical devices.*

# ***Risk Management***

Uses for the *residual risk* technology solution:

1) The *residual risk* technology solution can be utilized during design control to quantify the overall residual risk of the product failure modes associated with the targeted market segment.

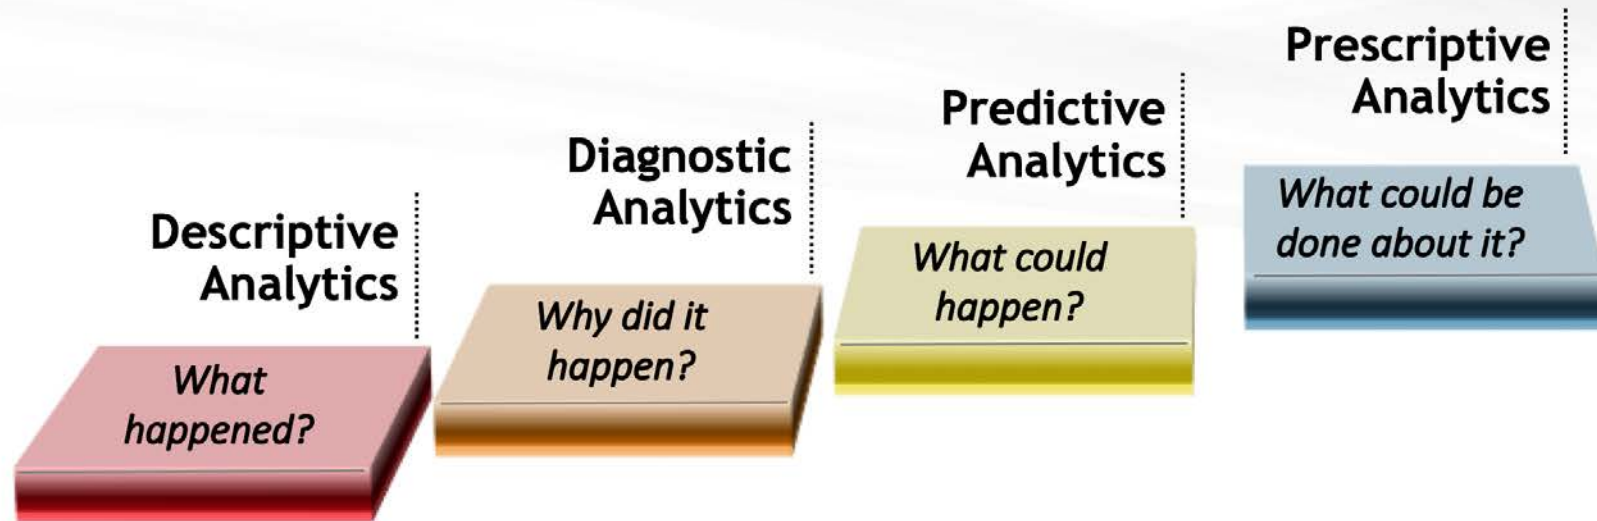

**Today's focus...**

2) The *residual risk* technology solution can be utilized to establish an understanding of the *'benefit'* of patient safety that is associated with the use of **currently marketed medical devices.**

# *The pathway to predictive 'quality'*

Analytical pathway...

...to retrospectively achieve the capability of ***predictive 'quality'*** for improved patient safety

# Diagnostic Analytics

SOTA, a risk-matrix, establishes the **risk thresholds** that are *inherent* within a specific product market.

Industry rate of harm established in risk-matrix

Rates	Risk Evaluation	Negligible (1)	Minor (2)	Serious (3)	Critical (4)	Catastrophic (5)
0.00001	Improbable					
0.0001	Remote				0.000035	
0.001	Occasional		0.000188	0.000452		0.000160
0.01	Probable	0.002406				
	Frequent					

Color coding added to risk matrix

Rates	Risk Evaluation	Negligible (1)	Minor (2)	Serious (3)	Critical (4)	Catastrophic (5)
0.00001	Improbable					
0.0001	Remote				0.000035	
0.001	Occasional		0.000188	0.000452		0.000160
0.01	Probable	0.002406				
	Frequent					

SOTA Matrix establishes inherent risk and acceptability

Rates	Risk Evaluation	Negligible (1)	Minor (2)	Serious (3)	Critical (4)	Catastrophic (5)
0.00001	Improbable					
0.0001	Remote					
0.001	Occasional					
0.01	Probable					
	Frequent					

# Diagnostic Analytics

**Risk acceptability** is established with a 'SOTA Matrix' to quantify the *overall residual risk* of a product.

Rates	Risk Evaluation	Negligible (1)	Minor (2)	Serious (3)	Critical (4)	Catastrophic (5)
0.00001	Improbable					
0.0001	Remote					
0.001	Occasional					
0.01	Probable					
	Frequent					

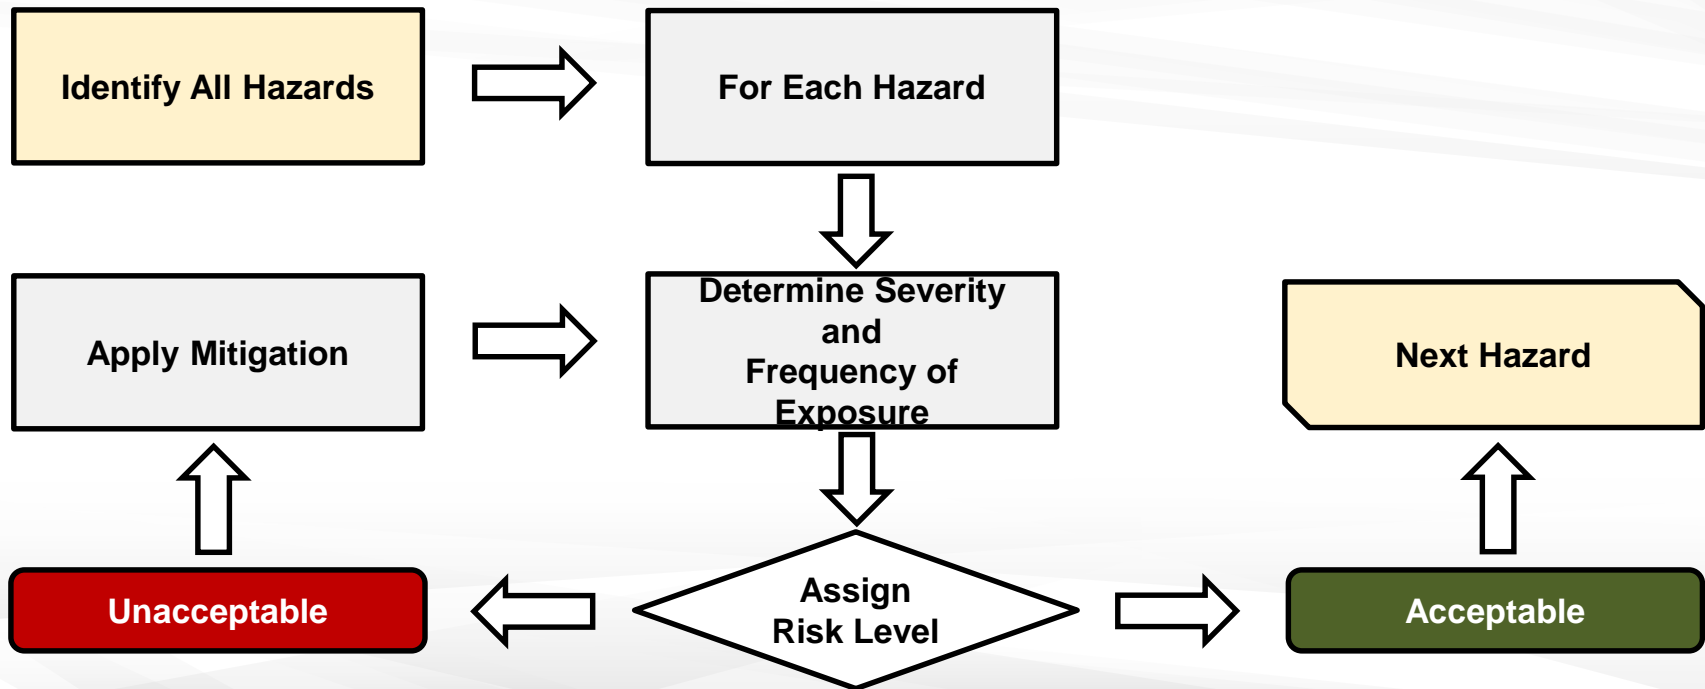

Rates	Risk Evaluation	Negligible (1)	Minor (2)	Serious (3)	Critical (4)	Catastrophic (5)
0.00001	Improbable					
0.0001	Remote				0.000035	
0.001	Occasional	0.000675	0.000278			0.000209
0.01	Probable			0.001252		
	Frequent					

Indication of unreasonable harm

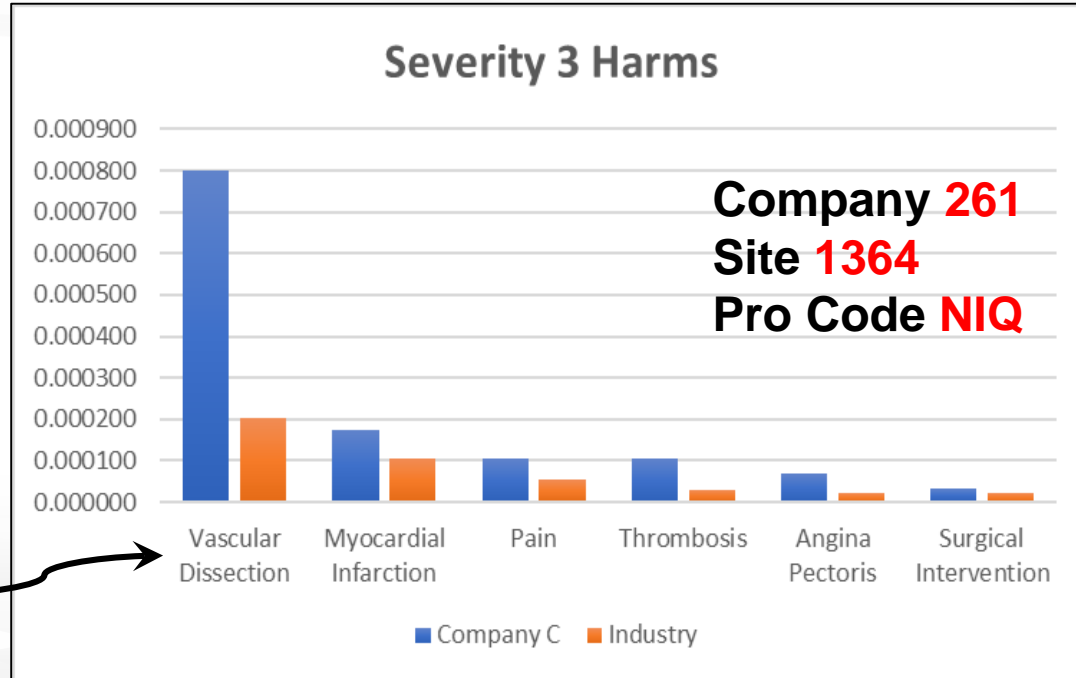

# Diagnostic Analytics

Hazards and harms are identified through a Hazards Analysis, used to investigate the indicated harm.

# Diagnostic Analytics

Individual harms are evaluated through a pareto of the 'rate of harms', contributing to the overall residual risk.

Egregious or unreasonable individual harm identified

# Diagnostic Analytics

‘SOTA matrix’ is established to assess *residual risk* of **individual harm** against risk acceptability.

Rates	Risk Evaluation	Negligible (1)	Minor (2)	Serious (3)	Critical (4)	Catastrophic (5)
0.00001	Improbable	Green	Green	Green	Yellow	Yellow
0.0001	Remote	Green	Yellow	Yellow	Yellow	Yellow
0.001	Occasional	Yellow	Yellow	Yellow	Red	Red
0.01	Probable	Yellow	Yellow	Red	Red	Red
	Frequent	Yellow	Yellow	Red	Red	Red

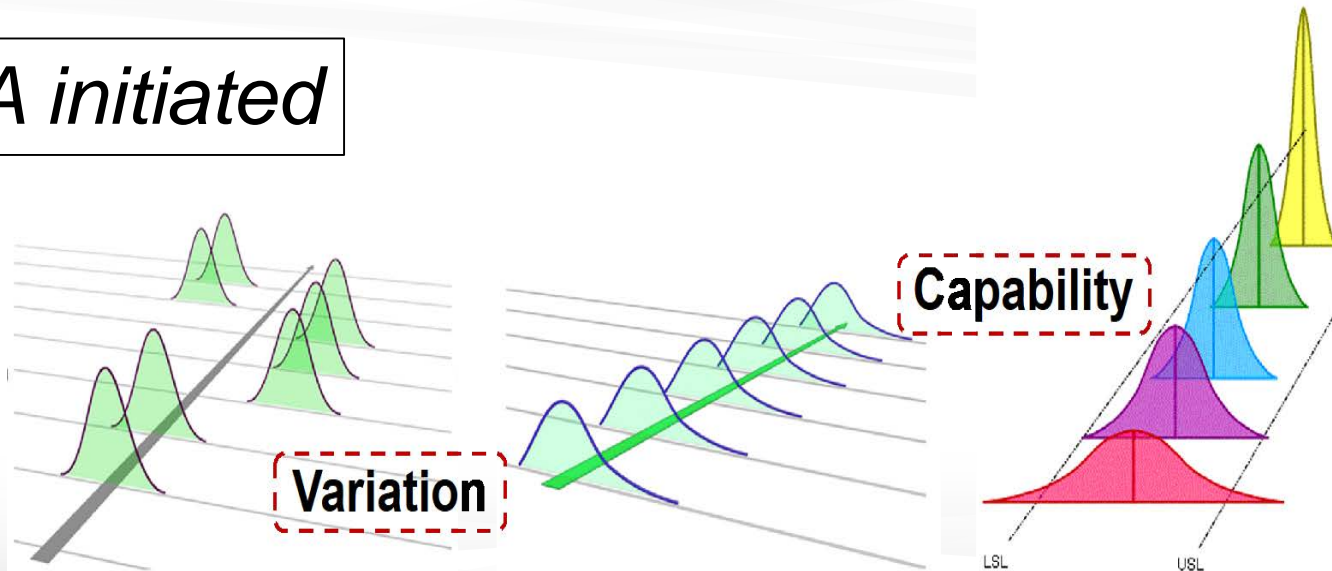

**Indication of unreasonable individual harm**

Rates	Risk Evaluation	Negligible (1)	Minor (2)	Serious (3)	Critical (4)	Catastrophic (5)
0.00001	Improbable	Green	Green	Green	Yellow	Yellow
0.0001	Remote	0.000070	0.000070	Yellow	Yellow	Yellow
0.001	Occasional	Yellow	Yellow	Yellow	Red	0.000209
0.01	Probable	Yellow	Yellow	0.006642	0.003852	Red
	Frequent	Yellow	Yellow	Red	Red	Red

# Diagnostic Analytics

Investigation is required to address inadequate or missing **risk control measures** associated with individual harm identified.

*CAPA initiated*

# Agenda

## Predictive *'quality'* Pathway

**Descriptive Analytics**  
*What happened?*

**Diagnostic Analytics**  
*Why did it happen?*

**Predictive Analytics**  
*What could happen?*

**Prescriptive Analytics**  
*How can we control it?*

# Predictive Analytics

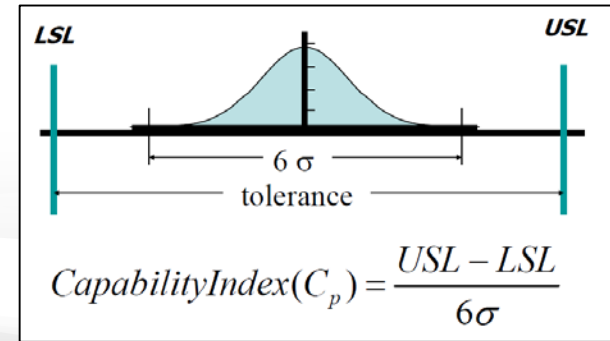

Analysis is required to identify level of improvement of risk control measures required to achieve SOTA.

Rates	Risk Evaluation	Negligible (1)	Minor (2)	Serious (3)	Critical (4)	Catastrophic (5)
0.00001	Improbable					
0.0001	Remote	0.000070	0.000070			
0.001	Occasional					0.000209
0.01	Probable			0.006642	0.003852	
	Frequent					

## Capability → σ Level

Sigma Level	Defect Rate	Production Yield
2σ	308,770 dpm	69.10000%
3σ	66,811 dpm	93.33000%
4σ	6210 dpm	99.38000%
5σ	233 dpm	99.97700%
6σ	3.4 dpm	99.99966%

# Agenda

XAVIER HEALTH

## Predictive *'quality'* Pathway

**Descriptive Analytics**  
*What happened?*

**Diagnostic Analytics**  
*Why did it happen?*

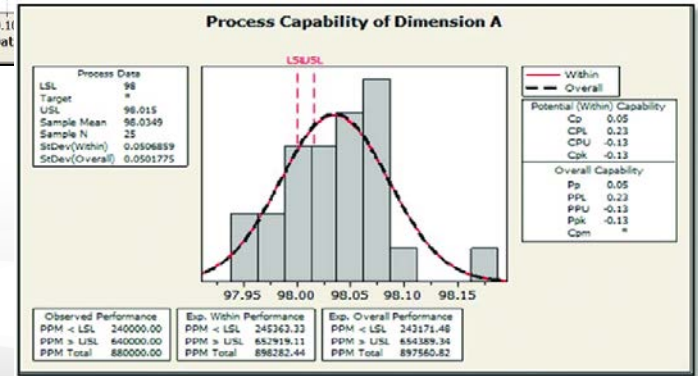

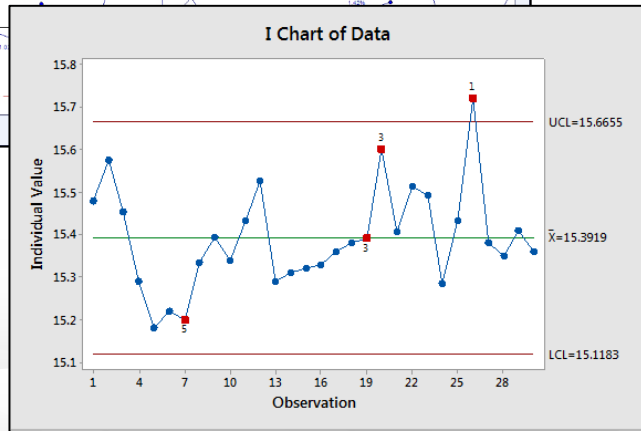

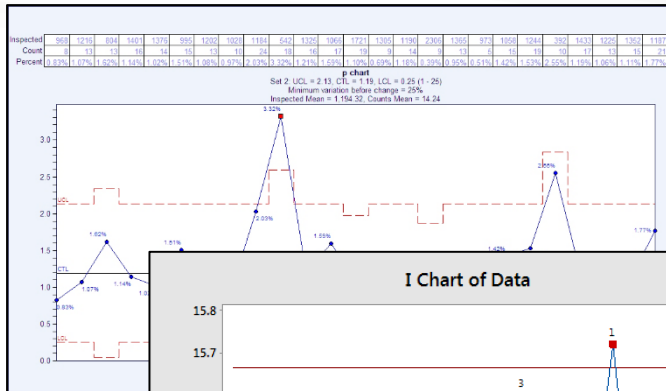

**Predictive Analytics**  
*What could happen?*

**Prescriptive Analytics**  
*How can we control it?*

# Prescriptive Analytics

Risk control measures for individual harm and associated with what is *'critical to quality'* are targeted.

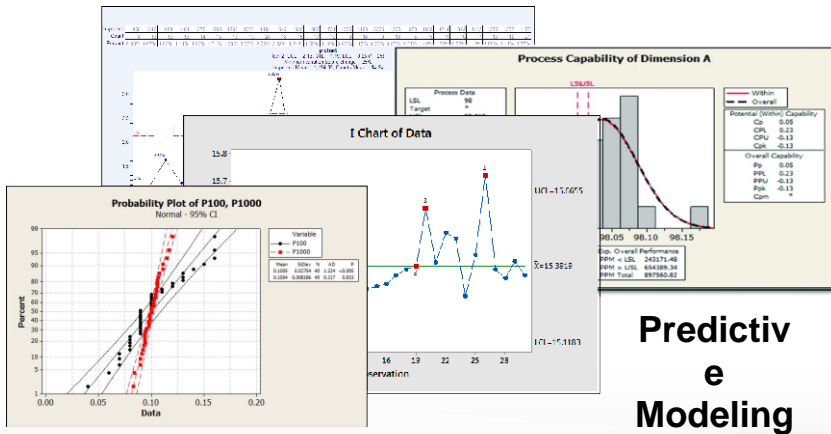

# Predictive Quality Management

## Risk Control Measures within the Production Environment

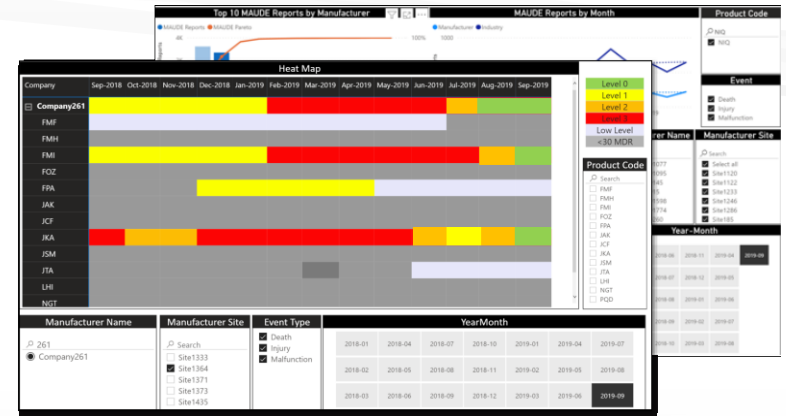

## Patient Safety within the Healthcare Market

### Capability and Variation

Correlation

Predictive Modeling

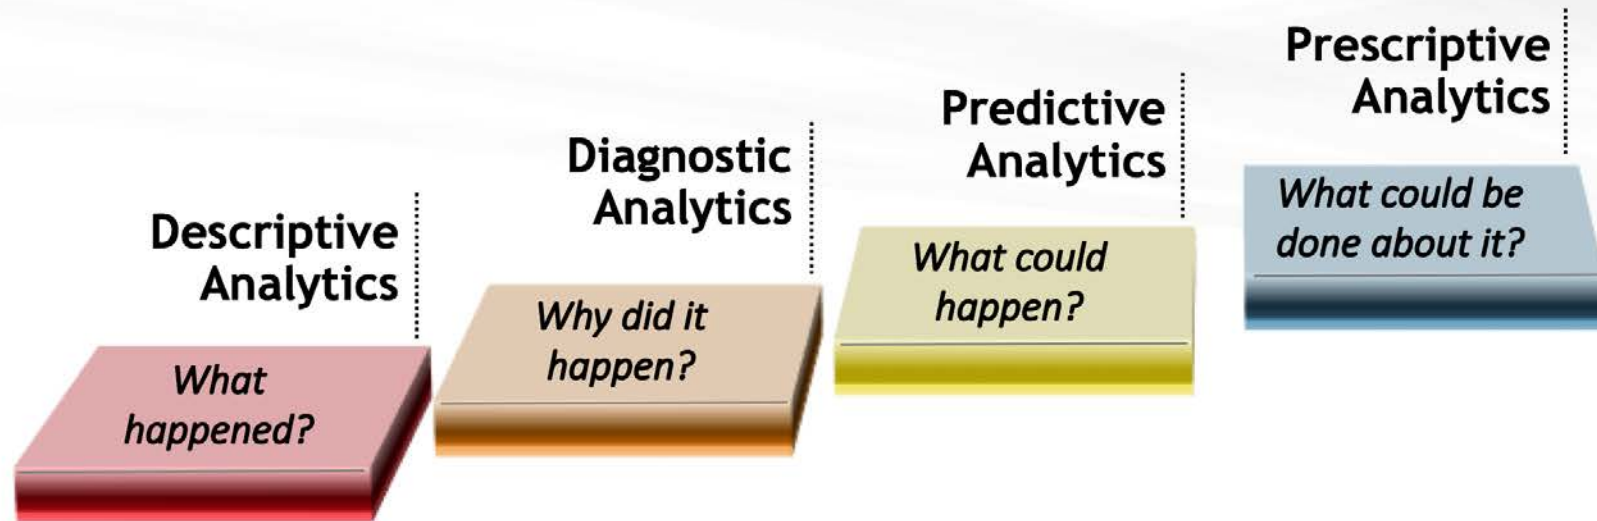

Measure - Monitor - Analyze - Report - Review - Manage - Improve - Sustain

# The pathway to predictive 'quality'

Analytical pathway...

...to achieve the capability of **predictive** 'quality' for managed patient safety

# Features

## *'Residual Risk Tool'*

The *'residual risk'* tool was designed to provide a medical device manufacturer with the capability to measure *'patient safety'* through an understanding of the **overall residual risk** of their device against the **inherent risk** of competitively marketed devices.

The "Top 10 MAUDE Reports by Manufacturer" provides a pareto of the MDR reports provided of the manufacturers, for a specific FDA product code.

**"MAUDE Reports by Month"** is a run chart that outlines the industry MDRs for a given product code

vs a company/site combination for that product code.

This chart enables us to understand if a particular company is the significant driver of market variability, with respect to the MDR's for competitively marketed products within the industry.

The **“Product Code”** field allows the user to focus upon a given FDA product code for analysis.

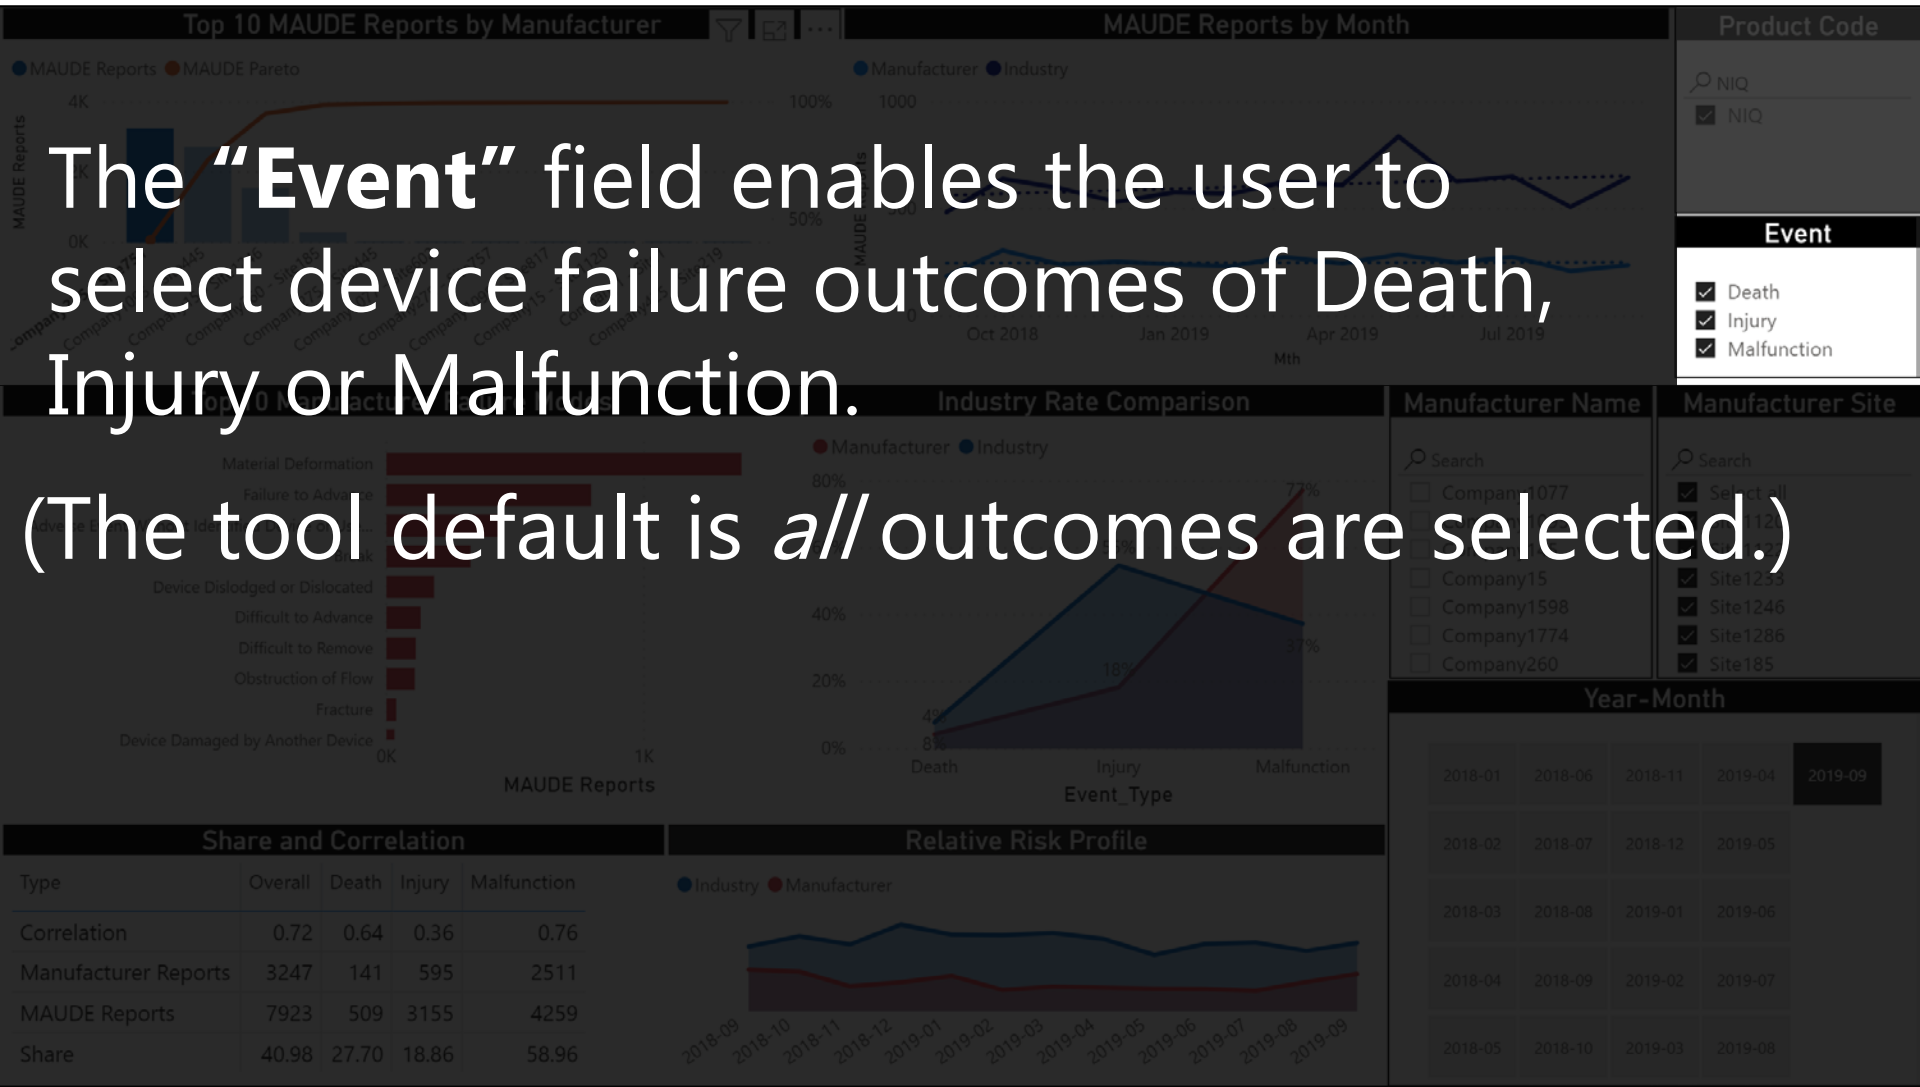

(An FDA product code is a three-letter designator used by the FDA to classify various product groups.)

The "Event" field enables the user to select device failure outcomes of Death, Injury or Malfunction.

(The tool default is *all* outcomes are selected.)

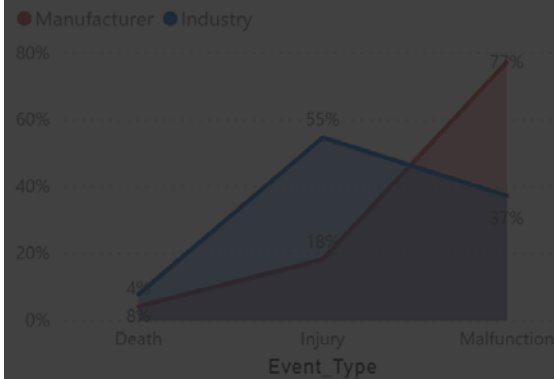

# The "Top 10 Manufacturer Failure Modes" field show the failure modes of a specific company/site/product code combination.

Relative Risk Profile

A specific "Manufacturer Name" and "Manufacturer Site" combination is selected to isolate the data of interest.

(All sites are selected for the manufacturer of interest in this example.)

The **"Share and Correlation"** data table provides general statistical information for a specific company/site/product code combination.

It is important to note that *"share"* means MAUDE share or the percentage of MDRs for a specific company/site/product code combination with respect to the industry for a specific product code.

**Share and Correlation**

Type	Overall	Death	Injury	Malfunction
